1. List of contents

2. General safety instructions

2.1 Information for your safety

We are pleased that you have decided for a high-class KIESELMANN product. With correct application and adequate maintenance, our products provide long time and reliable operation.

Before installation and initiation, please carefully read this instruction manual and the security advices contained in it. This guarantees reliable and safe operation of this product and your plant respectively. Please note that an incorrect application of the process components may lead to great material damages and personal injury.

In case of damages caused by non observance of this instruction manual, incorrect initiation, handling or external interference, guarantee and warranty will lapse!

Our products are produced, mounted and tested with high diligence. However, if there is still a reason for complaint, we will naturally try to give you entire satisfaction within the scope of our warranty. We will be at your disposal also after expiration of the warranty. In addition, you will also find all necessary instructions and spare part data for maintenance in this instruction manual. If you don't want to carry out the maintenance by yourself, our KIESELMANN service team will naturally be at your disposal.

2.2 Marking of security instructions in the operating manual

Hints are available in the chapter "safety instructions" or directly before the respective operation instruction. The hints are highlighted with a danger symbol and a signal word. Texts beside these symbols have to be read and adhered to by all means. Please continue with the text and with the handling at the valve only afterwards.

Symbol	Signal word	Meaning
	**DANGER**	Imminent danger which may cause severe personal injury or death.
	**ATTENTION**	Dangerous situation which may cause slight personal injury or material damages.
	**NOTE**	Marks application hints and other information which is particularly useful.

2.3 Designated use

The fitting is designed exclusively for the purposes described below. Using the fitting for purposes other than those mentioned is considered contrary to its designated use. KIESELMANN cannot be held liable for any damage resulting from such use. The risk of such misuse lies entirely with the user. The prerequisite for the reliable and safe operation of the fitting is proper transportation and storage as well as competent installation and assembly.

Operating the fitting within the limits of its designated use also involves observing the operating, inspection and maintenance instructions.

2.4 Personnel

Personnel entrusted with the operation and maintenance of the tank safety system must have the suitable qualification to carry out their tasks. They must be informed about possible dangers and must understand and observe the safety instructions given in the relevant manual. Only allow qualified personnel to make electrical connections.

2.5 Modifications, spare parts, accessories

Unauthorized modifications, additions or conversions which affect the safety of the fitting are not permitted. Safety devices must not be bypassed, removed or made inactive. Only use original spare parts and accessories recommended by the manufacturer.

2.6 General instructions

The user is obliged to operate the fitting only when it is in good working order. In addition to the instructions given in the operating manual, please observe the following:

- relevant accident prevention regulations
- generally accepted safety regulations
- regulations effective in the country of installation
- working and safety instructions effective in the user's plant.

3. Safety instructions

3.1 Field of application

The valve is utilised as a pneumatically controlled shut-off valve in food and beverage as well as in pharmaceutical, biotechnological and chemical industries.

The valve is designed for media characteristics according to article 9 of DGRL 97/23/EG for group 2 (media condition gaseous or liquid).

ATTENTION

- To avoid danger and damage, the fitting must be used in accordance with the safety instructions and technical data contained in the operating instructions.

3.2 General safety instructions

DANGER

- Danger of crushing or amputating limbs.
  Do not reach into the valve housing when in pneumatic mode.
- When removing the valve or valve components from the system, there is a danger of injury from escaping liquids or gases.
  Only dismantle when you are absolutely sure that the system is depressurized and free of liquids and gases.
- Danger of scalding and burns to parts of your body from liquids escaping from the leakage drain (L) (Fig. 8 /Page 9).
  The splash protection fixtures must always be attached to the leakage drain (L).
- The actuation can be dismantled.
  Danger of injury by prestressed pressure spring. Observe separate installation instructions.
  We recommend having the manufacturer do the maintenance work required for the actuation.

ATTENTION

- To avoid air leaking, only use pneumatic connection parts that have an O-ring seal facing the even surface.
- When mounting the clamps, the max. torque must not be exceeded (see technical Data).
- Steps should be taken to ensure that no external forces are exerted on the fitting.

3.3 General notes

NOTE

- All data are in line with the current state of development. Subject to change as a result of technical progress.

4. Function

Fig. 1

4.1 Functional description

The valve is utilised as a pneumatically controlled shut-off valve. Leakage detection takes place via the leakage outlet (L) at the lantern.

4.1.1 Actuator: air open - spring close

The valve opens with control air and closes with spring power by means of a lift drive.

4.1.2 Actuator: spring open - air close

The valve opens with spring power and closes with control air by means of a lift drive.

4.1.3 Actuator: air open - air close

The valve opens and closes with control air by means of a lift drive.

5. Installation informations

5.1 Installation instructions

The valve must be installed vertically with the actuator at the upwards. Liquid must be able to flow freely from the valve housing. In order to obviate damages, the integration of the pipeline has to be carried out without stress.

5.2 Welding guidlines

- Sealing elements integrated in weld components must generally be removed prior to welding.
- To prevent damage, welding should be undertaken by certified personnel (EN287).
- Use the TIG (tungsten inert gas) welding process.

NOTE
Impurities can cause damage to the seals. Clean inside areas prior to assembly.

6. Maintenance

6.1 Maintenance

The maintenance intervals depend on the operating conditions:

- temperature, temperature-intervals
- medium and cleaning medium
- pressure
- opening frequency

We recommend replacing the seals every 2 years. The user, however should establish appropriate maintenance intervals according to the condition of the seals.

NOTE

		Lubricant recommendation
EPDM; Viton; K-flex; NBR; HNBR	⇨	*Klüber Paraliq GTE703**
Silicone	⇨	*Klüber Sintheso pro AA2**
Thread	⇨	*Interflon Food**

**)It is only permitted to use approved lubricants, if the respective fitting is used for the production of food or drink. Please observe the relevant safety data sheets of the manufacturers of lubricants.*

6.2 Cleaning

The upper and lower process housing is cleaned via pipeline cleaning.

7. Technical data

Model:	Single seat valve
Valve size:	DN 40 - 80
Connection:	Welding end DIN11850 series 2
Temperature range:	Ambient temperature: +4° to +45°C Product temperature: +0° to +95°C medium dependent +140°C short time (30min) Sterilization temperature:
Operating pressure:	DN40 - 65 = max. 10 bar DN80 = max. 8 bar
Cleaning pressure:	3 bar
Pressure resistance:	30 bar
Vacuum:	1,5 - 10^{-6} mbar x $^{l}/_{s}$ (test pressure 0,5mbar)
Control air pressure:	5,5 - 8,0 bar
Quality of control air:	ISO 8573-1 : 2001 quality class 3

Material:	**in product contact**	**not in product contact**
Stainless steel:	1.4404 / AISI316L	1.4301 / AISI304
Surfaces:	RA ≦0,8µm e-pol.	metallic bright, e-pol.
Seals:	k-flex (FDA) 150°C EPDM (FDA) 140°C PTFE	EPDM

Tightening moment:

Retaining clamp: Dimension nominal

Torque in Nm	DN 40	DN 50	DN 65	DN 80

Valve stroke	DN 40	DN 50	DN 65	DN 80	
	18	18	20	27	

8. Control system - and interrogation system

8.1 Special features valve control -optional-

Optionally, modular valve control systems can be installed to the actuator for reading and actuating valve positions. The standard version is a closed system with SPS or ASI-bus switch-on electronics, and integrated 3/2-way solenoid valves. For tough operating conditions we recommend employing a high-grade steel cover.

8.2 Proximity switch receiver set -optional-

For the acquisition of the valve positions over inductive initiators, a limit switch support is mounted on the actuation. The enquiry takes place over the position of the piston rod.

9. Pneumatic valve actuation

9.1 Actuator: air open - spring close (Lö- Fs)

Valve function	pneumatic Control with MV in Control unit (Fig. 2 /Page 8)	pneumatic Control with external solenoid valve (MV) (Fig. 2 /Page 8)
Valve "OPEN"	control air feed P ➟ MV1 ➟ P1/LA2 Valve is opening by control air	control air feed external MV ➟ LA2 Valve is opening by control air
Valve "CLOSED"	de-aeration LA2/P1 ➟ MV1 ➟ R Valve is closing by spring	de-aeration LA2 ➟ external MV Valve is closing by spring

9.2 Actuator: spring open - air close (Fö - Ls)

Valve function	pneumatic Control with MV in Control unit (Fig. 2 /Page 8)	pneumatic Control with external solenoid valve (MV) (Fig. 2 /Page 8)
Valve "CLOSED"	control air feed P ➟ MV1 ➟ P1/LA1 Valve is closing by control air	control air feed external MV ➟ LA1 Valve is closing by control air
Valve "OPEN"	de-aeration P1/LA1 ➟ MV1 ➟ R Valve is opening by spring	de-aeration LA1 ➟ external MV Valve is opening by spring

9.3 Actuator: air open - air close (Lö - Ls)

Valve function	pneumatic Control with MV in Control unit (Fig. 2 /Page 8)	pneumatic Control with external solenoid valve (MV) (Fig. 2 /Page 8)
Valve "OPEN"	control air feed P ➟ MV1 ➟ P1/LA2 Valve is opening by control air	control air feed external MV ➟ LA2 Valve is opening by control air
Valve "CLOSED"	de-aeration P ➟ MV3 ➟ P3/LA1 Valve is closing by control air	de-aeration external MV ➟ LA1 Valve is closing by control air

Control unit with Solenoid valve

MV = Solenoid valve

R = de-aeration, sound absorber

P = compressed-air inlet (control unit)

LA = compressed air inlet (actuation)

S = slide switch - manual control (solenoid valves)

Control head with Initiators

I = Initiators

H = Angle bracket

E = de-aeration

LA = Air connection

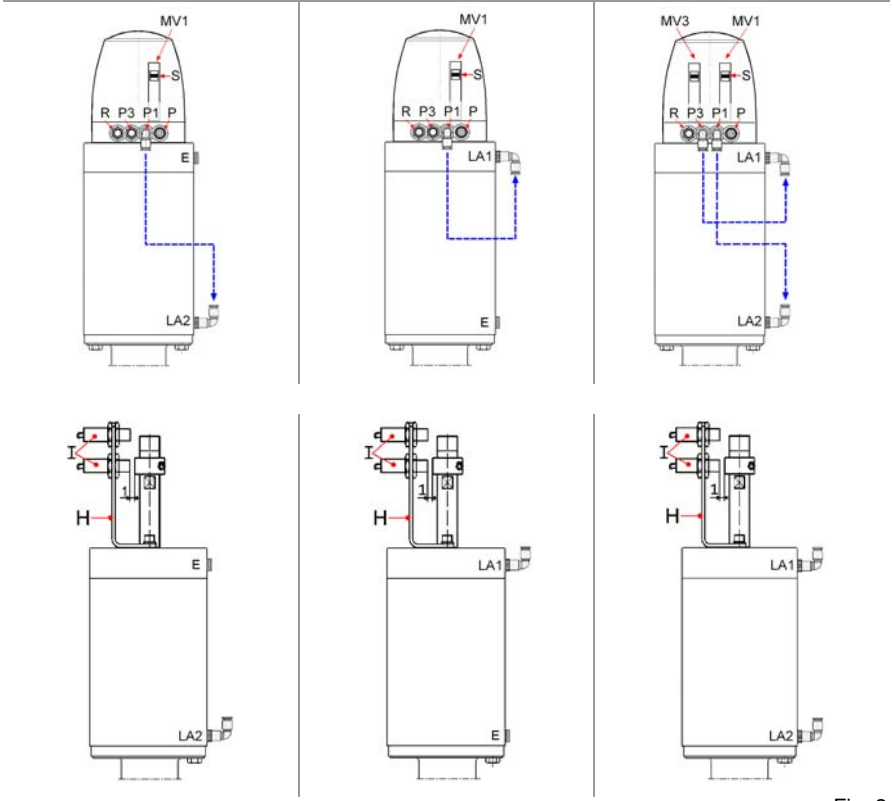

Fig. 2

10. Disassembly and assembly

(see Fig. 9 /Page 10)

10.1 Disassembly valve insert VE

NOTE
Dismount control air, steam, condensate pipelines and electric lines, complete proximity switch mounting or control heads.

Wrench size

SW	1	2	3	4	B
DN40	19	27	17	17	ø7
DN50	19	27	17	17	ø7
DN65	19	24	17	17	ø7
DN80	27	30	17	17	ø8

Dismount valve insert with actuator lö-fs

- Connect the compressed air (P) to the air connection (LA2) thereby the piston moves toward X.
- Remove retaining clamp (4) and pull out carefully and without rotary movement the valve insert (VE) from the valve housing (VG).
- Disconnect the compressed air (P) from the air connection (LA2) thereby the piston moves against toward X.

Dismount valve insert (VE) with actuator ls-fö and lö-ls

- Remove retaining clamp (4) and pull out carefully and without rotary movement the valve insert (VE) from the valve housing (VG).

10.2 Exchanging seals

(see Fig. 9 /Page 10)

- Screw off piston plate (1) while holding against at the wrench size (SW2).
- Dismount sealing (D1).
- Screw off piston (2) at the wrench size (SW2), while holding against with round rod 8mm at drilling (B1).
- Take off carefully the diaphragm(D3) from the upper piston (3) and the lantern (5).
- Screw off locking screw (8).
- Loosen screws (9) and pull off lantern (5).
- Dismount plain bearing (D3) and O-Ring (D4).

10.3 Assembly

- Thoroughly clean and slightly lubricate mounting areas and running surfaces. Assemble in reverse order.

NOTE
During assembly, tie diaphragm (D2) carefully on lantern (5) and on the upper piston (3). Fig. 3 /Page 7

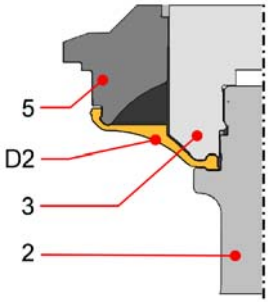

Fig. 3

Centering ring

DN	Order number
DN40	5620 051 025-020
DN50	5620 051 025-020
DN65	5620 065 025-020
DN80	5620 080 025-020
DN100	----------

10.4 Assembly K-Flex - seal (D1)

- Fit the O-Ring into the k-flex seal.
- Assemble the ring shells as in the Fig. 4 /Page 7 in the order A, B, C, D

10.5 Assembly sealing ring (D1)

- Screw together piston plate (1) and piston (2) manually to metallic stop position without sealing ring and carry out colour marking (Fig. 5 /Page 7).
- Once again screw off piston plate (1) from piston (2).
- Push sealing (D1) on piston (2) and manually screw the piston plates (1) into the pistons (2).
- For centring the seal (D1) on piston (1), the centring ring has to be placed as shown in Fig. 5 /Page 7.
- Stretch the spanner flat (SW1) with soft braces in bench vice and screw in piston (2) over spanner flat (SW2) until marking.

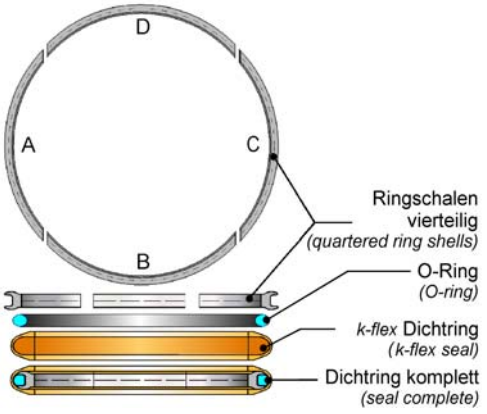

Fig. 4

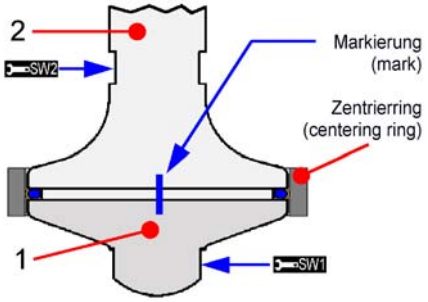

Fig. 5

10.6 Assemble the valve insert (VE) into the valve housing (VG)

➤ **Adjust the installation position of the piston with the mounting tool (MW)**

MW

	Mounting tool MW for GEMBRA Single seat valves	
	DN40 - DN65	Art.-No.: 5836 000 065-000
	DN80	Art.-No.: 5836 000 080-000

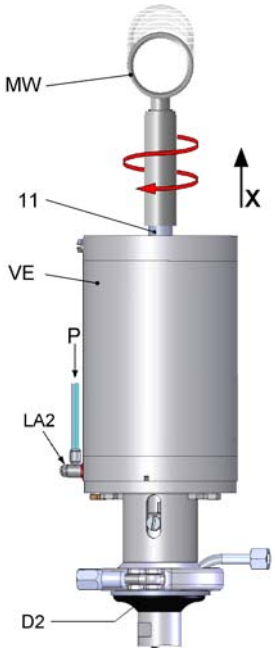
Kind of actuator: air open - spring close

- Connect the compressed air (P) to the air connection (LA2) thereby the piston moves toward X.
- Unsrew the cap (14).
- Screw in the mounting tool (MW) as far as possible into the spindle (11).
- Disconnect the compressed air (P) from the air connection (LA2) thereby the valve drives into installation position.

Kind of actuator: air close - spring open
air close - air open

- Unsrew the cap (14).
- Screw in the mounting tool (MW) as far as possible into the spindle (11).
- Connect the compressed air (P) to the air connection (LA1 air close-spring open) and (LA2 air open-air close) respectively. Fig. 2 /Page 6
- The valve drives into installation position.

NOTE
In this valve position the diaphragm (D2) is in its basic position and is optimally compressed between lantern and housing.



Actuator: lö-fs Fig. 6

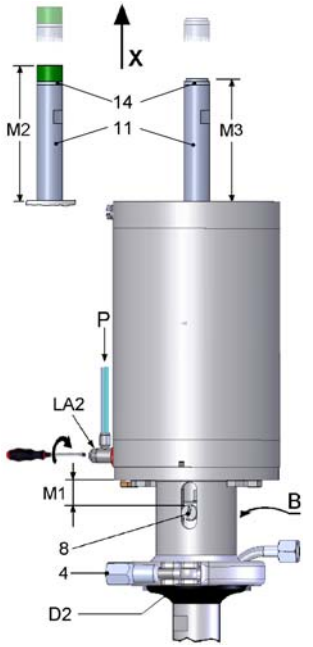
➤ **Adjust the installation position of the piston without the mounting tool (MW)**

- Connect compressed air (P) to the trottle valve (LA1 ls-fö) and (LA2 lö-ls / lö-fs) respectively.
- According to kind of the actuator the piston drives out or in.
- Close the throttle valve at (LA1 or LA2) with a screwdriver.
- Disconnect the compressed air at the throttle valve (LA1 or LA2).
- The piston stops in the position. Position a calliper on the adjustment dimension M1 or M2.
- Slowly open the throttle valve at (LA1 or LA2), so that the piston drives out or in.
- Close the throttle at the position M1 respectively M2. (If an control head is assembled, the adjustment dimension M1 is measured between the actuator and the pin (8).

	Bore	adjustment dimension for the installation position		
	B	M1	M2[a]	M3[b]
DN40	ø7	18,5	107	96
DN50	ø7	18,5	107	96
DN65	ø8	29	104	93
DN80	ø8	35	98	87

a. old version
b. new version

NOTE
In this valve position the diaphragm (D2) is in its basic position and is optimally compressed between lantern and housing.



Actuator: lö-fs Fig. 7

Assemble the valve insert into the valve housing

- Carefully install the valve insert in the housing.

NOTE
When installing the valve seat, do not damage the sealing surfaces on the piston and the housing as well as the seals.

- Assemble the retaining clamp (4) (Please note the torque data! See the tightening moment in technical data).
- Slowly open the throttle valve again. The piston drives into its basic position.
- Check the valve functions.

KIESELMANN
FLUID PROCESS GROUP

Declaration of incorporation

Translation of the original

Manufacturer / authorised representative:

KIESELMANN GmbH
Paul-Kieselmann-Str. 4-10
75438 Knittlingen
Germany

Authorised representative,
for compiling technical documents:

Achim Kauselmann
KIESELMANN GmbH
Paul-Kieselmann-Str. 4-10
75438 Knittlingen
Germany

Product name	**Function**
pneum. Lift actuators	Stroke movement
pneum. Rotary actuators	Rotary movement
Ball valves	Media cutoff
Butterfly valves	Media cutoff
Single seat valves	Media cutoff
Flow control valves	Control of liquefied media
Throttle valve	Control of liquefied media
Overflow valve	Definition of fluid pressure
Double seat valve	Media separation
Bellow valves	Sampling of liquids
Sampling valves	Sampling of liquids
Two way valves	Media cutoff
Tankdome fitting	Prevention of overpressure and vacuum, Tank cleaning

The manufacturer hereby states that the above product is considered as an incomplete machine in the sense defined in the Directive 2006/42/EC on Machinery. The above product is exclusively intended to be installed into a machine or an incomplete machine. The said product does not yet conform to all the relevant requirements defined in the Directive on Machinery referred to above for this reason.

The specific technical documents listed in Appendix VII, Part B, have been prepared. The Authorized Agent empowered to compile technical documents may submit the relevant documents if such a request has been properly justified.

Commissioning of an incomplete machine may only be carried out if it has been determined that the respective machine into which the incomplete machine is to be installed conforms to the regulations set out in the Directive on Machinery referred to above.

The above product conforms to the requirements of the directives and harmonized standards specified below:

- DIN EN ISO 12100 Safety of machinery

Knittlingen, 08. 01. 2014

Klaus Dohle
General Director
